The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States. Claims 1-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Mizumoto et al

(5351226).

The reference discloses an optical disk recording and reproducing apparatus comprising: an amplifier for amplifying a read signal 4, a controller 3 for positioning the light beam on a non-program area of the disk (TOC or lead in area) S1, focusing lock in determining step S2, determine if the RF signal is high or low S5, if the RF signal is not high moving the light spot to a program area of the disk fig 7 in order to determine a valid signal meeting the claimed invention.

With respect to the limitations of claims 2, 14 and 25 the reference dsicloses the movement of the beam spot to the outer area of the disk in the second movement step.

With respect to the limitations of claims 3, 5, 15, 17, 26, and 28, see fig 2a-4c.

With respect to the limitations of claims 4, 16, and 27. The read signal would have a level indicative of the partially recorded disk on the medium since the TOC is stored in a memory and not eh lead in areas as acknowledged by applicant's own prior art.

With respect to the limitations of claims 6, 18, and 29 see step S6.

Art Unit: 2653

With respect to the limitations of claims 7, 19, and 30 see column 7 lines 10-20.

With respect to the limitations of claims 8, 20 and 31 see fig 7 element S22.

With respect to the limitations of claims 9-11, 21, 22, and 32 The limitation "indirectly" is clearly defined in the claims and merely read on any signal processing. See elements 4-7 and the controller 10.
